

Database Schema Documentation

This document outlines the SQLite database schema used in the FrameSprite application.

Table: projects

This table stores the metadata and canvas dimensions for user-created drawing projects.

Column Name	Data Type	Constraints	Default Value	Description
id	INTEGER	PRIMARY KEY , AUTOINCREMENT	None	The unique identifier for the project.
title	TEXT	NOT NULL	None	The display name or title of the project.
user_id	INTEGER	NOT NULL	None	A reference to the user who owns/created the project.
challenge_id	INTEGER	NOT NULL	None	A reference to the challenge this project is associated with.
height	INTEGER	None	600	The height of the project's canvas in pixels.
width	INTEGER	None	800	The width of the project's canvas in pixels.
last_modified	DATETIME	None	CURRENT_TIMESTAMP	The timestamp indicating when the project was created or last updated.

Relationships

- user_id → Belongs to users.id
 - Relationship:** 1-to-Many. (A User can have many Projects).
- challenge_id → Belongs to challenges.id

- **Relationship:** 1-to-Many. (A Challenge can have many Projects associated with it).
